Snowflake Cost Scan

Prepared for: Acme Inc. (sample data) · October 13, 2026

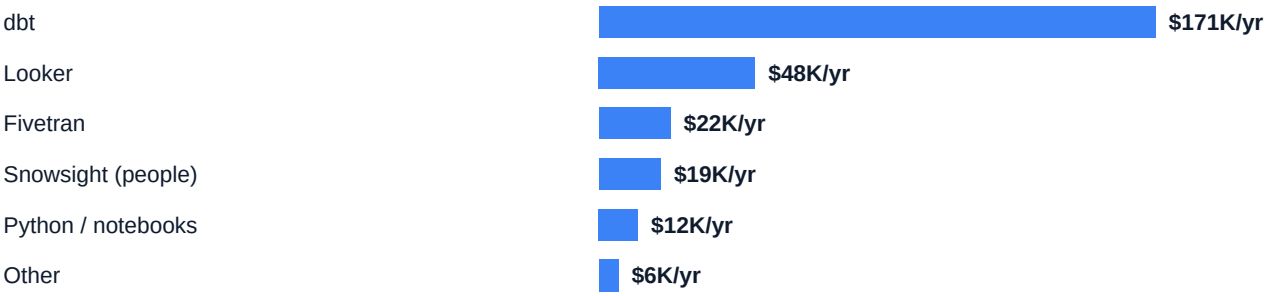
Annual spend	Savings potential	Idle compute	Spend growth
$412K	**$61K-$79K**	**21%**	**3.2%/mo**
Last 30 days, annualized	per year (15-19% of spend)	$74K/yr billed with no query running	Compute & services, average over the last 6 months

Where your money goes

Warehouses 86% ($356K) · Storage 10% ($41K) · Serverless & AI 4% ($15K)

Who spends it

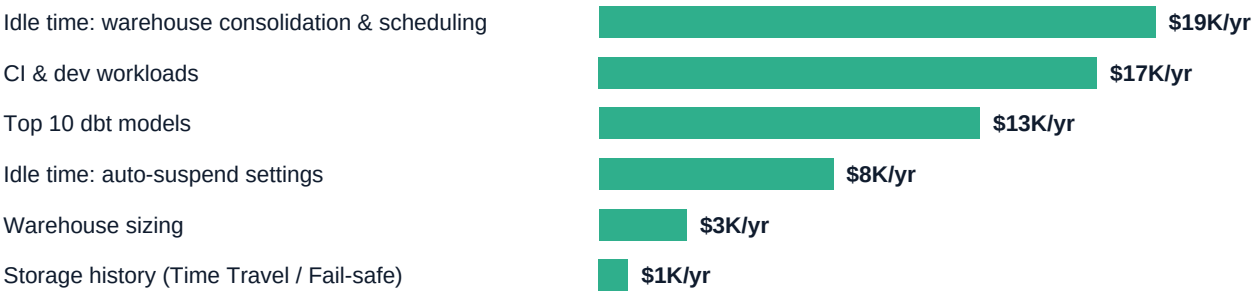
Query compute by tool, last 30 days annualized.



Query compute by environment.

Production 77% ($214K) · CI 14% ($38K) · Dev & ad hoc 9% ($26K)

Where the savings are



What stood out

- fct_orders and dim_customers rebuild hourly in full; switching them to incremental is likely the fastest win.
- CI spends $38K a year, almost a tenth of query compute; trimming CI data by date usually halves that.
- LOOKER_WH sits idle a third of the time between dashboard refreshes; consolidating it with ANALYST_WH removes most of that.

Top 10 most expensive dbt models

#	Model	Runs (30 days)	Cost per year
1	model.analytics.fct_orders	1440	$21K
2	model.analytics.fct_sessions	720	$14K
3	model.analytics.dim_customers	1440	$9K
4	model.marketing.attribution_daily	30	$7K
5	model.finance.revenue_recognition	30	$6K
6	model.analytics.fct_events	1440	$5K
7	model.product.feature_usage	720	$4K
8	model.analytics.int_order_items	1440	$3K
9	model.marketing.campaign_rollup	30	$3K
10	model.analytics.snapshot_accounts	30	$2K

Top 5 warehouses by idle cost

#	Warehouse	Idle cost per year
1	LOOKER_WH	$24K
2	TRANSFORM_WH	$17K
3	CI_WH	$11K
4	ANALYST_WH	$9K
5	FIVETRAN_WH	$6K

Monthly compute & services spend

2026-04	2026-05	2026-06	2026-07	2026-08	2026-09
$27K	$28K	$29K	$30K	$30K	$31K

What the full audit adds

Free scan (this report)	Full cost audit
Where the money goes	Why it goes there, for every warehouse, model and query
Savings range by focus area	Every fix priced in $/yr and ranked by payback
Top models and warehouses	Step-by-step fix plan, plus up to 3 quick wins applied
-	Serverless features, unused tables, commitment fit

This scan already points to **$61K+ a year** in savings. The full audit turns it into a ranked, step-by-step plan. Questions: hello@metricgrain.com

Method: last 30 full days of SNOWFLAKE.ACCOUNT_USAGE, annualized; trend from the last 6 full months. Prices: $2.40/credit, $23.00/TB-month (your contract rates). Tools are detected from query comments, users and client applications; environments from dbt targets and warehouse, role and user names. Savings assumptions: 30% of short-suspend idle time recoverable by consolidation; 25% of query credits on qualifying oversized warehouses; 30% of CI & dev spend; 20% of the top 10 dbt models' spend; half of Time Travel / Fail-safe storage. The high end of the range adds 5% of warehouse spend for query tuning. Estimates are for prioritization, not guaranteed invoice reductions.
